

Natural Resources Revenue Data

Renewables Fact Sheet Fiscal Year (FY) 2019

Geothermal and wind revenue

Top 5 Locations

Location	Commodity	FY 19 Revenue	18 Year Trend
Offshore Atlantic	Wind	\$ 420,036,123	
California	Geothermal	\$ 8,422,282	
Nevada	Geothermal	\$ 7,458,881	
Utah	Geothermal	\$ 657,560	
Idaho	Geothermal	\$ 248,111	
Total for all 11 states/regions		\$ 437,037,805	

Geothermal and wind disbursements

For FY 19, **3%** of renewables disbursements went to states and counties and **97%** went to the U.S. Treasury.

Commodity	FY 19 Disbursements	5 Year Trend
Geothermal	\$ 17,221,754	
Wind	\$ 420,036,123	
Total	\$ 437,257,877	

Geothermal production

Electrical generation

The utilization of geothermal resources to generate electricity for sale, measured in mass (thousands of pounds), electricity (kilowatt hour), or other.

FY 19 Production	Electrical generation units	18 Year Trend
3,195,518,756	kilowatt hours	
2,764,782,962	thousands of pounds	

Direct use

The utilization of geothermal for commercial, residential, agricultural, public facilities, or other energy needs other than the commercial production or generation of electricity, measured in volume (millions of gallons or hundreds of gallons) or thermal energy (millions of Btu).

FY 19 Production	Direct use units	18 Year Trend
232,725	millions of btus	
42,713,876	hundreds of gallons	
215,536,561	millions of gallons	

Geothermal sulfur

Geothermal byproduct that is commercially recovered from produced geothermal fluids, measured in long tons.

FY 19 Production	Sulfur units	18 Year Trend
2,276	long tons	

This fact sheet includes geothermal and wind energy produced on federal and Native American lands. For more information, visit the [onshore](#) and [offshore](#) renewables pages.
