

Natural Resources Revenue Data

Renewables Fact Sheet Fiscal Year (FY) 2023

Geothermal and wind revenue

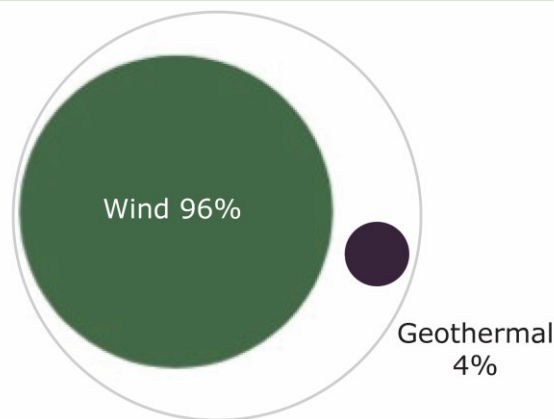

Top 5 Locations

Location	Commodity	FY 23 Revenue	20 Year Trend
Offshore Pacific	Wind	\$ 588,129,032	
Nevada	Geothermal	\$ 14,265,108	
California	Geothermal	\$ 9,759,661	
Offshore Atlantic	Wind	\$ 7,314,942	
Utah	Geothermal	\$ 1,086,168	
Total for all 11 states/regions		\$ 620,782,748	

Geothermal and wind disbursements

For FY 23, **3%** of renewables disbursements went to states and counties and **97%** went to the U.S. Treasury.

Commodity	FY 2023	7 year trend
Geothermal	\$ 24,829,504	
Wind	\$ 595,443,974	
Total	\$ 620,273,478	

Geothermal production

Electrical generation

The utilization of geothermal resources to generate electricity for sale, measured in mass (thousands of pounds), electricity (kilowatt hour), or other.

FY 23 Production	Electrical generation units	21 Year Trend
3,857,481,165	kilowatt hours	
1,860,850,708	thousands of pounds	

Direct use

The utilization of geothermal for commercial, residential, agricultural, public facilities, or other energy needs other than the commercial production or generation of electricity, measured in volume (millions of gallons or hundreds of gallons) or thermal energy (millions of Btu).

FY 23 Production	Direct use units	21 Year Trend
198,384	millions of btus	
17,212,179	hundreds of gallons	
403,754,675	millions of gallons	

Geothermal sulfur

Geothermal byproduct that is commercially recovered from produced geothermal fluids, measured in long tons.

FY 23 Production	Sulfur units	21 Year Trend
2,343	long tons	

This fact sheet includes geothermal and wind energy produced on federal and Native American lands. For more information, visit the [onshore](#) and [offshore](#) renewables pages.
