

Natural Resources Revenue Data

Renewables Fact Sheet Fiscal Year (FY) 2022

Geothermal and wind revenue

Top 5 Locations

Location	Commodity	FY 22 Revenue	19 Year Trend
Offshore Atlantic	Wind	\$ 4,639,312,372	
Nevada	Geothermal	\$ 9,984,235	
California	Geothermal	\$ 9,257,839	
Utah	Geothermal	\$ 1,679,014	
Oregon	Geothermal	\$ 50,485	
Total for all 11 states/regions		\$ 4,660,348,562	

Geothermal and wind disbursements

For FY 22, **1%** of renewables disbursements went to states and counties and **99%** went to the U.S. Treasury.

Commodity	FY 22 Disbursements	6 year trend
Geothermal	\$ 21,979,122	
Wind	\$ 4,639,312,372	
Total	\$ 4,661,291,494	

Geothermal disbursements accounted for less than 1% of disbursements in FY 22.

Geothermal production

Electrical generation

The utilization of geothermal resources to generate electricity for sale, measured in mass (thousands of pounds), electricity (kilowatt hour), or other.

FY 22 Production Electrical generation units 20 Year Trend

3,612,020,888	kilowatt hours	
2,049,847,928	thousands of pounds	

Direct use

The utilization of geothermal for commercial, residential, agricultural, public facilities, or other energy needs other than the commercial production or generation of electricity, measured in volume (millions of gallons or hundreds of gallons) or thermal energy (millions of Btu).

FY 22 Production Direct use units 20 Year Trend

2,549,078	millions of btus	
19,570,381	hundreds of gallons	
333,281,213	millions of gallons	

Geothermal sulfur

Geothermal byproduct that is commercially recovered from produced geothermal fluids, measured in long tons.

FY 22 Production Sulfur units 20 Year Trend

2,187	long tons	
-------	-----------	--

This fact sheet includes geothermal and wind energy produced on federal and Native American lands. For more information, visit the [onshore](#) and [offshore](#) renewables pages.
